

A scatter plot showing the relationship between RL relative forward error (x-axis) and RL relative backward error (y-axis) on a log-log scale. The x-axis ranges from 10^{-16} to 10^{-8} , and the y-axis ranges from 10^{-16} to 10^{-8} . A dashed diagonal line represents the line of equality ($y = x$). Data points are colored by their error magnitude: blue for 10^{-16} to 10^{-15} , orange for 10^{-14} to 10^{-13} , and green for 10^{-12} to 10^{-8} . Most points lie on or near the diagonal line, indicating that forward and backward errors are of similar magnitude. There is one notable outlier at approximately $(10^{-10}, 10^{-9})$.
